MANNOL Tire Shine
9683

Tire Shine is a particularly resistant and hardy water – based blackener for tires that gives them a long-lasting and intense black color and Shine.

Properties:
- Contains polymers and natural oils: the coating formed in this way, unlike silicone, does not allow the rubber to dry and does not attract dust and dirt;
- Not only creates a coating, but also is absorbed by rubber – tires retain an intense black color and Shine for several weeks in any weather: under the sun and in the rain;
- Returns a rich dark black color even to faded gray tires, masking micro-cracks and minor defects;
- Creates a waterproof and water-repellent film on the surface after four hours;
- Softens rubber, protects tires from further cracking and counteracts the aging of rubbers of any composition;
- Protects the rubber from the damaging effects of ultraviolet light;
- It can handle the bumper and moldings (if they are black) and rubber seals on the car doors to prevent freezing in the cold.

Application:
Thoroughly clean the surface to be treated, apply the product as thinly as possible with a sponge and that's it!
Attention: avoid getting the product on the wheels and in the brake system.
